Safety

Two Control Surfaces - Table and Sanding Drum

Keep hands 3” from Guard

Sand nothing shorter than 12”

Always use dust collection

User Manual

Digital Scale

Drum Sander Policy

The drum sander is designed for fine sanding and minor thickness adjustments—it is **not a planer**. Don't use it to remove significant material or flatten badly warped boards. That's a job for the planer.

Using the Machine

- One quarter turn of the thickness handle equals 1/64" of material removal
- Never remove more than 1/64" in a single pass
- Make two passes at the same setting before lowering for another cut

Sandpaper

Members provide their own sandpaper. You can purchase it from The Joinery (when in stock), Woodcraft in Madison, or online from Amazon.

Before Your First Use

Read the manual linked on this page to understand the machine's specs and proper operation.
